Rohtak Haryana

SKILLS

- Reactjs
- Nextjs
- Nodejs
- JavaScript
- Nestjs
- Ethers
- Data Modelling
- Typescript
- Micro frontend
- Monorepo
- SSR

EDUCATION

Chitkara University
Chandigarh • 08/2021

Bachelor of Engineering: Computer Science

- 9.25 CGPA

PROFESSIONAL SUMMARY

I'm a full stack developer with 3 years of experience, specializing in JavaScript frameworks and libraries. I excel in writing efficient code for a great user experience. My expertise includes ReactJS, NodeJS, NextJS, NestJS, and blockchain technology. I've worked on smart contracts, decentralized apps, and blockchain protocols. I'm adept at agile development and meeting tight deadlines. Always staying current with the latest tech trends.

WORK HISTORY

Examroom.ai - Web3 Frontend Developer

03/2022 - Current

- Implemented a complete frontend configuration setup for a job portal which contains micro frontend, monorepo using NX, module federation
- Migrated existing monolithic frontend to run-time micro frontend using module federation with use of single Redux store
- Added an extra layer of login using Crypto wallets in the existing user management module
- Build a fully functional crypto wallet.

VT Netzwelt - Associate Software Engineer

06/2021 - 12/2021

- Worked on a bookings component of a hotel booking project
- Worked on multiple modules using Reactjs, Redux Toolkit, Nodejs, Formik and Sequelize.

24/7 Software - Software Developer

06/2020 - 03/2021

- Worked on frontend of profile component, dashboard of Staff Scheduling app using Reactjs
- Implemented Skeleton loading and internalization using i18n.

PROJECTS

Blockport

- It's a web3 based job portal. Responsible for finalizing the scope of project, high level and low level design, data modelling and the development of app.
- Implemented a detailed frontend development setup using NX to leverage common app/libraries within the shell setup, employing run-time micro frontend with module federation. Added server-side rendering using Nextjs with server-rendered Redux.
- Implementing Clean architecture using Nestjs.

DrippWallet

- It's a fully decentralized crypto wallet build using Reactjs, Nodejs, ethers. It consists of multiple modules like send token/coin, swap, add custom chain, import/create wallet and import custom token.

DrippScan

- It's a blockchain network explorer similar to etherscan. Worked on fetching chain data using ethers, creating APIs and UI components of the app.
